

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Description of a New California Song Sparrow.

BY RICHARD C. MCGREGOR.

EXAMINATION of a small series of *Melospiza* from Battle Creek shows that there exist in the northern Sacramento valley two races of the Song Sparrow. Four examples sent Mr. Robert Ridgway were thus commented upon by him: "Three of those from Battle Creek are typical M. f. heermanni, by far the most northern specimens I have seen of that form, and proving, I think, that this is the resident form of the Sacramento basin, as I had already suspected. It is this form which breeds at Stockton. The fourth Battle Creek specimen is probably best referred to M. f. guttata although it is really an intermediate between that form and M. f. montana or possibly heermanni; much nearer, however, to guttata."

Since taking this specimen above called "intermediate", I have secured three song sparrows of similar plumage at Battle Creek and on reaching home I find in my collection two sparrows of a dark plumage, one from Enterprise, Butte Co., and the other from St. Helena, Napa Co. These six skins are easily distinguished from either *heermanni* or *guttata* and form the types of an undescribed race to which I give the name:

Melospiza fasciata ingersolli, subsp. nov. Tehama Song Sparrow.

Subsp. char. Most closely related to guttata but darker and without rusty wash; spotting of lower parts tending more to streaks than to spots as in guttata; wing slightly longer. Entire upper parts, sides of head and flanks are darker and less grayish than in heermanni.

Type. No. 2222, & ad. Coll. R. C. McG., Battle Creek, California, Oct. 19, 1898. Wing, 2.82; tail, 2.74; tarsus, .88; exposed culmen, .44.

Geog. Dist. Northern Sacramento valley, south in winter to San Francisco Bay.

Without a Nomenclature of Colors it is impossible for me to describe the absolute colors of the three forms; typical specimens of the new race are in no way to be confused with *heermanni*. From *guttata* it is distinguished by the much darker and browner dorsum, with centers of feathers almost black; crown stripe obsolete; entire plumage lacking the rusty or reddish brown which is characteristic of *guttata*.

Beside the Battle Creek skins four others seem worthy of mention.

No. 1564. Enterprise, Cal., Oct. 15, 1896. This bird is easily referable to ingersolli though not so dark on the back as are the types.

No. 1346. Saint Helena, Cal., Dec. 21, 1897. This is intermediate between guttata and the new form.

No. 1345. Saint Helena, Cal., Dec. 22, 1897. Very dark; markings of back almost obsolete; referable to *ingersolli*.

No. 1563. Sebastopol, Sonoma Co., Cal., Dec. 2, 1884. This skin is typical guttata.

Specimens from Beaverton, Or., have been used as representing M. f. guttata.

I take pleasure in naming this race for my friend, Mr. Albert M. Ingersoll of San Diego, California.

	Wing.	Tail.	Tarsus.	Exposed Culmen.
M. f. guttata Beaverton, 5 skins	2.58-2.78 (2.69)	2.60-2.70 (2.67)	.8486 (.85)	.4447 (.45)
M. f. heermanni Battle Cr'k, 4 skins	2.64-2.75 (2.71)	2.66-2.78 (2.73)	.7380 (.77)	.4044 (.42)
M. f. ingersolli 4 skins	2.61-2.82 (2.72)	2.45-2.76 (2.65)	.8288 (.85)	.4446 (.45)

TABLE OF MEASUREMENTS.
